proceeding
Incident response
Legal Framework
Electronic Discovery

Cybersecurity Services

Secure Software Design
Penetration Testing
Threat Analysis
Cybersecurity Framework
Data Protection Technology

Software quality Assurance Services

Process Engineering
Statement of User Requirement Review
Software Testing
Secure Software Development

Experience

We work with corporations, attorneys, individuals, and private investigators to prevent, respond to cyber-attacks, uncover digital evidence to support civil, criminal, and business investigations. With the ever-changing technological landscape, we offer our employees the opportunity to learn and advance their skills in cybersecurity and digital forensics on regular basis, hence we always have staff with knowledge of current state-of-the-art tools and legal frameworks.

Our employees have 10 years' experience in digital forensic, cybersecurity and software development. We carry out investigations using both commercial and open-source software. Also, we deliver thorough and legal admissible forensic reports to support client's cases and providing credible documentation.
